INTENDED USE

MAS[®] chemTRAK[®] · H is intended for use as a consistent test sample of known concentration for monitoring assay conditions in many clinical laboratory determinations. Include **chemTRAK[®] · H** with patient serum specimens when assaying for any of the listed constituents. Assay values are provided for the specific systems listed. The user can compare observations with expected ranges as a means of assuring consistent performance of reagent and instrument.

PRODUCT DESCRIPTION

chemTRAK[®] · H is a liquid stable control material prepared from human serum. Analyte levels are adjusted with various animal extracts and other non-protein materials including drugs, drug metabolites and purified chemicals. Amylase, ALT/GPT, AST/GOT, CK and lipase are obtained from porcine tissue; alkaline phosphatase and GGT are from bovine tissue; LDH is from avian tissue. Preservatives and stabilizers are added to maintain product integrity.

CAUTION: chemTRAK[®] · H is prepared from human source material. Components of the control which are derived from human source material have been tested using FDA accepted methods and found non-reactive for Hepatitis B Surface Antigen (HBsAg), Hepatitis C (HCV), HIV-1 and HIV-2. However, no test method can offer complete assurance that products derived from human source material are free of infectious agents. This control must be handled in accordance with recommendations from Centers for Disease Control/National Institutes of Health manual, "Biosafety in Microbiological and Biomedical Laboratories," 2009. The packaging of this product contains dry natural rubber.

DANGER: chemTRAK[®] · H control contains ≤1.1% bovine serum albumin (BSA).

H317 - May cause allergic skin reaction.

H334 - May cause allergy or asthma symptoms or breathing difficulties if inhaled.

Avoid breathing mist or vapor. Contaminated work clothing should not be allowed out of the workplace. Wear protective gloves/eye protection/face protection. In case of inadequate ventilation wear respiratory protection. If on skin: Wash with plenty of soap and water. IF INHALED: If breathing is difficult, remove victim to fresh air and keep at rest in a position comfortable for breathing. If skin irritation or rash occurs: Get medical advice/attention. If experiencing respiratory symptoms: Call a POISON CENTER or doctor/physician. Wash contaminated clothing before reuse. Dispose of contents/container to location in accordance with local/regional/national/international regulations.

STORAGE AND STABILITY

Once opened, vials of **chemTRAK[®] · H** are stable for 7 days when stored tightly capped at 2-8°C. Unopened vials of **chemTRAK[®] · H** are stable for 30 days from receipt when stored at 2-8°C. This product is stable until the expiration date on the box when stored at -25 to -15°C. For optimum performance, DO NOT store in a self-defrosting freezer, and maintain at -25 to -15°C until thawing for use.

Bacterial contamination produces an increase in turbidity and/or a characteristic odor. Discard vial if evidence of microbial contamination is observed.

CONTROL RANGES

The published control ranges are based upon a combination of replicate assays of representative samples by participating laboratories, instrument/reagent manufacturers and direct correlation with other analytical systems in accordance with established protocol. Instrument values provided are specific to this lot of control only and are intended to assist the laboratory in establishing its own means and ranges. All values have been assigned with instruments and reagents available at the time of assay and expected values may vary with different reagents and/or methodologies. Laboratory established means should fall within the assigned ranges although subsequent instrument, reagent or calibration modifications may invalidate assigned values.

Peer comparison data and latest QC lot specific updates are available online through LabLink[®] xL Quality Assurance Program at www.maslablink.com. Refer to the Technical Assistance section for contact information.

INSTRUCTIONS FOR USE

Thaw the control at room temperature (18-25°C) on a rocker or with periodic gentle inversion until liquid and then immediately store at 2-8°C. Once opened, do not allow the vial to come to room temperature. Maintain the control at 2-8°C at all times and minimize exposure to light. Thoroughly mix the contents of the vial before each use by gently inverting for several minutes. Once the control is removed from 2-8°C open the vial and transfer the required quantity of control into a clean sample cup. Replace cap immediately and store the opened vial at 2-8°C. Assay the aliquot of control in accordance with the reagent manufacturer's instructions. Do not return unused sample to the vial.

ONCE THAWED, DO NOT REFREEZE THE CONTROL.

Dropper tips are available to help minimize exposure of control samples to air. DO NOT use a syringe needle to withdraw sample through the control bottle cap.

QUALITY CONTROL

All quality control requirements should be performed in conformance with local, state and/or federal regulations or accreditation requirements.

LIMITATIONS OF PROCEDURE

Compatibility of **chemTRAK[®] · H** has been demonstrated only with methods shown in this insert. Caution should be employed when using these controls with methods for which values have not been printed.

The following constituent is also weighed into **chemTRAK[®] · H**. Stability Characteristics have not been established for Acid Phosphatase. No stability claim is made.

The specificity of antibodies used in immunoassay procedures may vary between lots. As with patient specimens, cross-reactivities between certain constituents in this control serum may occur with some reagents. Consult reagent manufacturer's package insert regarding possible interferences.

Minimize exposure to strong light for optimum bilirubin stability.

For best results when measuring CO₂, handle with the same care given patient samples. Avoid prolonged exposure of samples to air. Withdraw sample and replace cap immediately. Maintain the vial at 2-8°C. Assay the sample without delay.

If low values are observed for Alkaline Phosphatase, Phosphorus and/or Magnesium assay results upon initial thaw, an additional equilibration at 2-8°C for 18-24 hours may be necessary for full recovery.

Accurate and reproducible results are dependent upon properly functioning instruments, reagents, and good laboratory technique. This product is intended for use as an assayed control for quantitative assays of listed constituents in human serum. This product is not intended for use as a calibrator. For Professional Use Only.
